The following is an examiner's statement of reasons for allowance: GB 2105318 to BOC describes a process for the aerobic-thermophilic stabilization and disinfection (pathogen reduction) of sludge, wherein: a) raw sludge 18, e.g., from municipal sewage treatment plants, having an unspecified dry matter content is fed to a first stage 8. Although BOC describes the introduction of an oxygen-containing gas into the first stage 8 to obtain a partially stabilized sludge, the raw sludge remains in the first stage for an average retention time of only about 18 – 36 hours at about 35°C , not from four to ten days at temperatures of at least 42 °C as claimed. The partially stabilized sludge is then fed to a second stage in which the partially stabilized sludge is further stabilized and disinfected at temperatures of above 50 °C with the introduction of an oxygen-containing gas. The second stage average retention time is the same as during the first stage, i.e., about 18 – 36 hours, rather than 30 to 70 % of the average retention time of the first stage.

USP 6966983 to McWhirter describes (Fig., 2, (col 5 line 37+)) a process for the stabilization and disinfection of sludge wherein raw sludge having a dry matter content of at least 3% by weight is fed quasi-continuously into a first stage, where it remains for an average retention time of 5 - 10 days under aerobic-thermophilic conditions to obtain a partially stabilized sludge; and said partially stabilized sludge is fed into a second stage in which disinfection of the partially stabilized sludge is effected at temperatures of 55 - 65°C (col 5 line 37+) wherein prior to discharging, there is no charging until said partially stabilized sludge has been disinfected. McWhirter fails to describe retention

Art Unit: 1797

time in the downstream ATAD vessel being 30 - 70% of the retention time of the upstream vessel.

USP 4983298 to Fuchs does not teach or suggest shorter retention times in the Stage B reaction compared to the Stage A reaction. Rather, the retention times in the second aerobic stage are longer than those of the first aerobic reaction.

4975194 20080245729 are cited of interest

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
